

Astronomy promised to return in the school curriculum

In the winter of this year, the Ministry of education and science assured that astronomy actually never disappeared from the curriculum: the main topics studied in elementary school and in middle and high schools in the course of General physics.

By and large, Russian students should fully be aware of what rotates around what, why the seasons follow each other, what is the shape and tilt angle of our planet and the Moon glows. Mastery of basic astronomical literacy of the current school curriculum provides and the education Act forbids schools to introduce an additional course in astronomy as an elective subject.

To say simple, but to implement training, development of manuals and training programmes [help with statistics](#) with the involvement of the expert Council — is much more difficult. And how much can be allocated hours in a week under another compulsory subject? One? Two?

The theme of the introduction of astronomy in the school curriculum in 2014 on PostNuke discussed by the leading scientists of the country. And they all came to approximately the same conclusions: astronomy is the perfect course.

Astronomy is not an isolated discipline. Astro space education in school is not to raise, even if you enter a separate required course, if thus, for example, will be killed or extremely simplified school physics or math that it now seems quite real, and triumph scoplamine look at what we should teach.

Anatoly Bolt

Professor of astrophysics and stellar astronomy, faculty of physics, Moscow state University

In General, maybe this is another populist statement. Maybe, and no.

Bonus

The Beauty Of The Universe

A collection of loud statements Vasilyeva for the last month:

- Ban to coach students on the exam in my spare time
- Keep small rural schools
- To consolidate the basic teachers' salaries at the level of 70%
- To reduce the amount of paperwork teachers
- To make difficult questions in the history books "beyond"

And the loud thing for starters: the Ministry of education and science of the dismissed employee, voluntarily made in the resolution clause stating that to deprive of a scientific degree for plagiarism is possible only by court order.
